Professional Summary

Computer Science student focused on Data Analytics and Machine Learning, experienced in building real-world projects using Python, SQL, NLP, and AWS. Strong foundation in EDA, feature engineering, model building, and deploying ML pipelines for domains like cybersecurity, healthcare, and finance.

Skills

- **Programming proficiency:** C, C++, Java, Python, JavaScript, HTML, CSS
- **Data & Analytics:** Data Analytics, EDA, Data Acquisition, Data Manipulation, Data Modeling, Big Data, Excel, Tableau
- **ML & Engineering:** Machine Learning, Deep Learning, Pandas, NumPy, ETL, MySQL, AWS Glue, Amazon S3, NLP, Joblib
- **Cloud & Tools:** AWS, Oracle Cloud Infrastructure (OCI), Postman API, Git, GitHub, MATLAB

Education

Vellore Institute of Technology

Bachelor of Technology, Computer Science and Engineering

- **Coursework:** DSA, OOPS, NLP, AI/ML

Aug 2023 - Aug 2027

Vellore, India

Experience

National University of Singapore, NUS | [Certificate](#)

Academic Intern

Jun 2025 - Jun 2025

Singapore

- Conducted exploratory data analysis (EDA) on large-scale user activity and system log data to identify behavioral patterns and indicators of insider threats, applying concepts from applied machine learning with generative AI.
- Built and evaluated one machine learning model for insider threat detection using techniques from Big Data Analytics and Deep Learning and presented findings under faculty supervision.

Projects

Insider Threat Detection | [GitHub](#)

Aug 2025 - Oct 2025

- Built an Insider Threat Detection system using User Behavior Analytics (UBA) on the CERT Insider Threat dataset, integrating login/logoff, email, HTTP browsing, file activity, and USB/device logs into a unified dataset.
- Engineered behavior-based risk features (e.g., off-hours logins, abnormal file access, suspicious email attachments, non-HTTPS browsing, late-night USB usage) to capture insider threat patterns.
- Developed a hybrid anomaly detection pipeline using Autoencoders + Isolation Forest + LightGBM, enabling detection and flagging of high-risk insider activities.

Shiksha Sahayak – Offline-First Education Management Console | [GitHub](#).

Sep 2025 – Nov 2025

- Developed an **offline-first education management platform** enabling schools to manage classes, worksheets, assessments, and student records in low-connectivity environments.
- Built a **full-stack system using FastAPI, Streamlit, MySQL, and JWT authentication**, integrating a locally hosted LLM with **FAISS semantic search** for AI-generated worksheets, assessments, and contextual Q&A.
- Designed a **privacy-focused architecture with local deployment and MySQL → Firebase backup**, supporting AI-assisted teaching workflows and secure student access.

AIInvestify | [GitHub](#)

Dec 2025 – Present

- Built an AI-powered Stock Screener that combines fundamental analysis + real-time news sentiment (VADER NLP) to classify stocks as strong/weak and generate actionable investment insights.
- Implemented an end-to-end pipeline using Python, yFinance + Google News RSS, performing automated data extraction, preprocessing, and sentiment scoring on company-related news.
- Trained and deployed ML models: Random Forest classifier for fundamentals (Good/Bad) and XGBoost regressor to generate a 0–1 fundamental strength score, exporting models with joblib for reuse in production scripts.

Certifications | [View Certificates](#)

- EICTA Kanpur - Professional Certificate in Data Analytics and Generative AI: 12/2025
- Postman API Fundamentals Student Expert: 08/2025 | [Badge](#)
- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional: 07/2025
- DeepLearning.AI - Supervised ML: 05/2025
- Udacity - Foundations of GenAI: 12/2024
